Data-Types:

The Main purpose of Data types is that to allocate sufficient amount of memory space for input of the program.

in python programming we have 14-Data types and classified into 6-types.

They are:

1) Fundamental category Data-type

a) Int

b) Float

c) Bool

d) Complex

2) Sequence category Data-type

a) str

b) bytes

c) bytearray

d) range

```
In [ ]:
```

3) List Category Data-type

a) List

b) Tuple

```
In [ ]:
```

Set Category Data-type

a) Set

b) FrozenSet

In [ ]:

Dict Category Data-type

a) Dict

In [ ]:

None Category Data-type

None type

In [ ]:
